

# LED Fireflies

LED Fireflies with Small Winged Body and Realistic Fading Firefly Effect.

Remember the days when you were a kid and you used to chase fireflies or lightning bugs around your backyard or down by the lake? They were such a rare site and you wish they would stay. Now you can have that wonderful magical feeling of having fireflies in you back yard. Bring the relaxing sights of summer to your back yard with the LED Fireflies from Blazen Illuminations.

Not like other fireflies that are powered by fans or other mechanical means our fireflies are powered by the wind.

Blazen Illuminations' patented LED fireflies make a wonderful addition to your backyard. Now you can have fireflies in your

backyard anytime of the year, and in any climate. Even if you don't have fireflies or lightning bugs where you live you will be able to enjoy the magic anytime. Light strings require three AA batteries (not included). Wire and battery box are waterproof and rated for indoor and outdoor use.

Each battery operated string comes with twelve LED fireflies so you can create a very dramatic effect of fireflies anywhere indoors or out. Our unique string design allows the fireflies to be strung across a trellis or in a tree and they will always be randomly places to look like a small group of fireflies.

Patented LED technology creates a realistic fading LED light, and with LEDs the bulbs will never burn out. Add a bit of magic and beauty that enhances your evening backyard experience.
