

C9 0.2 Watt Replacement Bulb

LED Replacement Bulb for Decorative Displays, Holiday Light Strings, and Night Lights

C9, E17 Intermediate Base, 2 Chip Super-bright LED, 120VAC

The C9 LED replacement bulb is a direct replacement of the traditional incandescent C9. The C9 is constructed of a durable polycarbonate multi-faceted lens with an E17 standard screw base. Due to the directional nature of LEDs the polycarbonate lens is faceted to distribute the light produced to create an even warm glow. The traditional C9 consumes 7-10 watts per bulb; the LED uses mere 0.1-0.2 watts and produces virtually no heat. The C9 is offered in a wide range of colors. You may choose from red, blue, green, orange, harvest gold, warm white and pure white.

LEDs are semiconductors and there are inherent variations in the fabrication of all semiconductors. The variations within the LED fabrication leads to a range with each color, these differences are sorted into separate bins. Diogen lighting uses a very strict standard for bin selection, to insure the quality of color expected from Diogen lighting.

The use of LEDs has many benefits. The benefits of LEDs are they use less energy, are better for the environment and most importantly they are safe. The C9 replacement bulb uses less than 1/20th of the electricity of a traditional C9. The materials used in the C9 replacements construction do not hurt the environment and are fully recyclable. Best of all there is no fear of a mercury spill or of anything being burned since LEDs produce virtually no heat.

Specifications:

COLOR	RED	YELLOW	GREEN	BLUE	WHITE
CURRENT (mA)	35	35	35	35	35
POWER (W)	0.1	0.1	0.2	0.2	0.2
LGHT (lm)	1.3	1.3	0.5	1.6	2.4
VOLTAGE	120V or 220V	120V or 220V	120V or 220V	120V or 220V	120V or 220V
